

NEXORA ROLE GUIDE

Parent User Guide

Polished user guide for the parent workspace. Includes menu maps, screenshots, and practical workflows.

Parent User Guide

Parent is the family-support role. This role is used to follow linked children, review progress, read alerts, and manage parent preferences.

Main menu

- Dashboard
- Children
- Progress
- Alerts
- Settings
- Search is available from the top bar

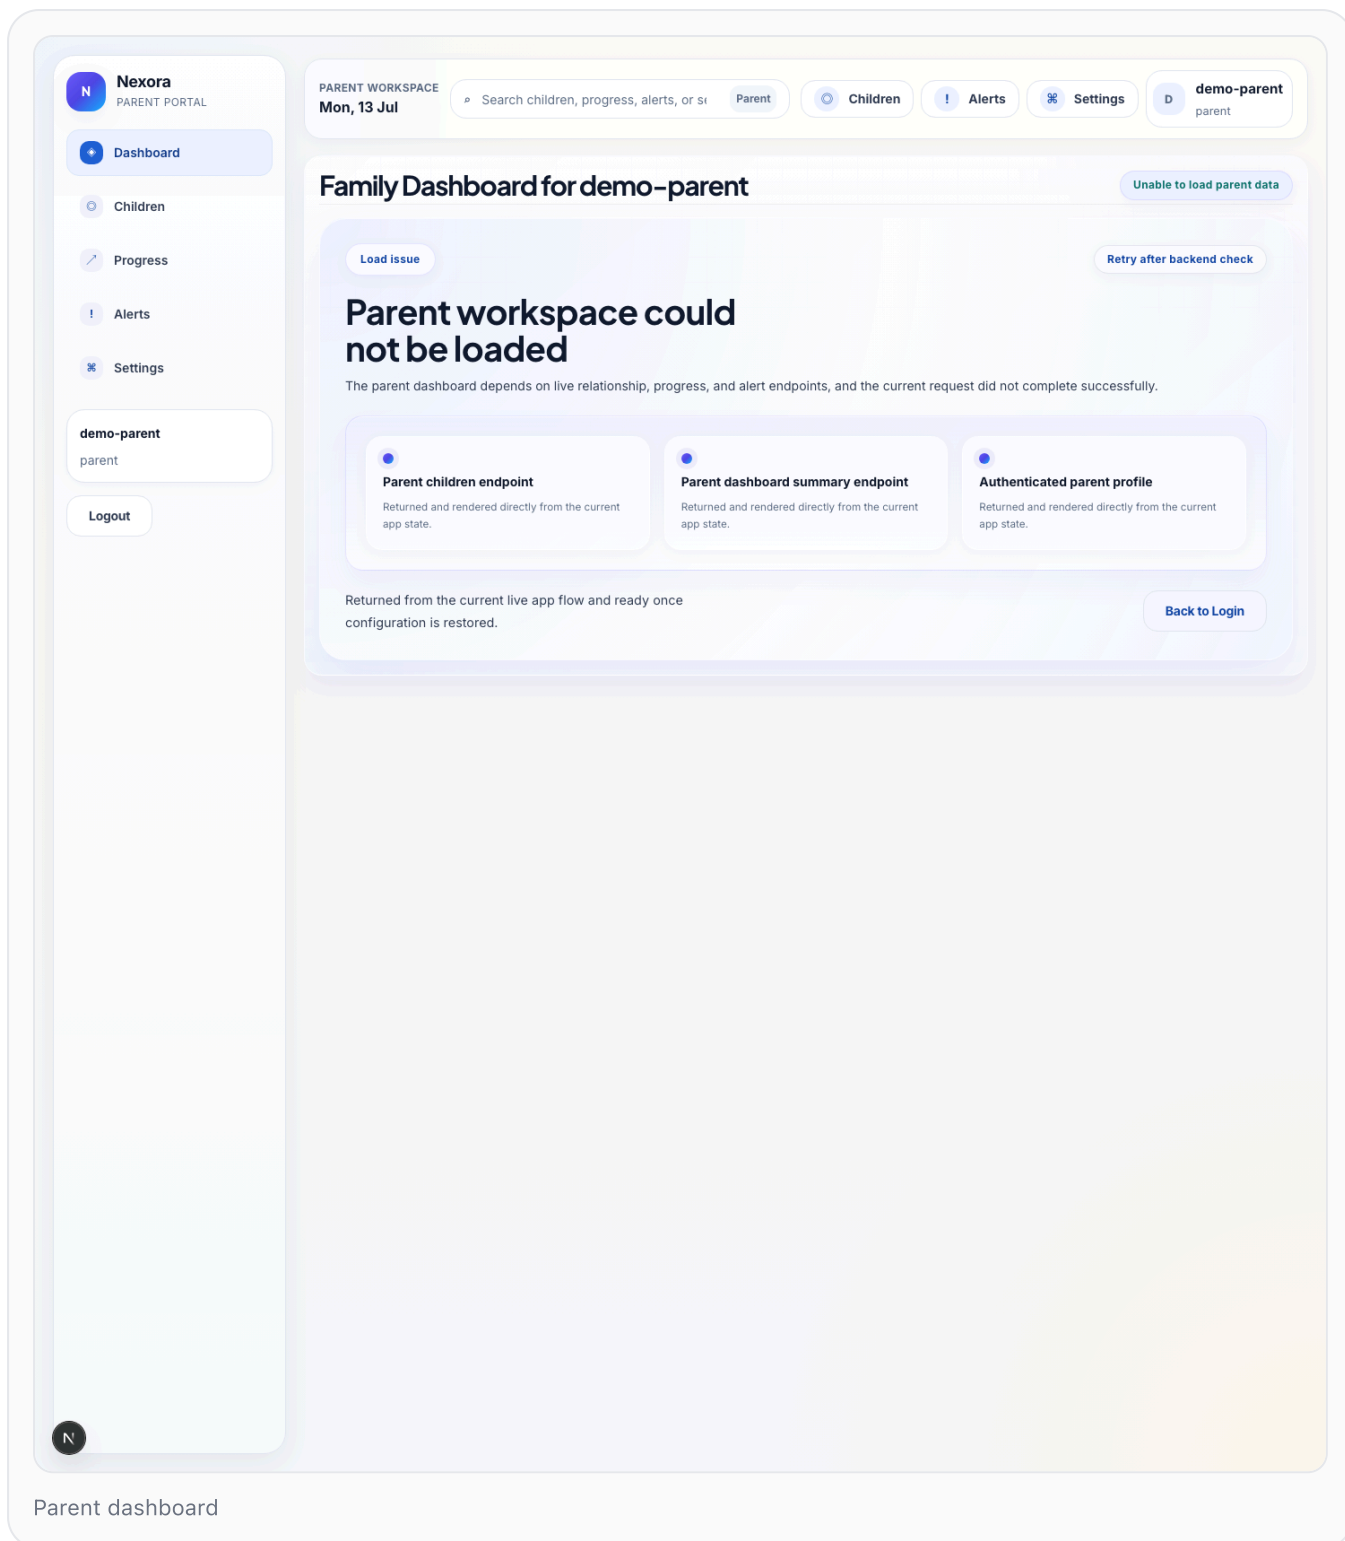

What this role does

Use parent when you need to:

- see linked children
- review child progress and readiness
- inspect alerts and family guidance
- adjust notification or workspace preferences
- move from a child summary into a more detailed family view

Key screens

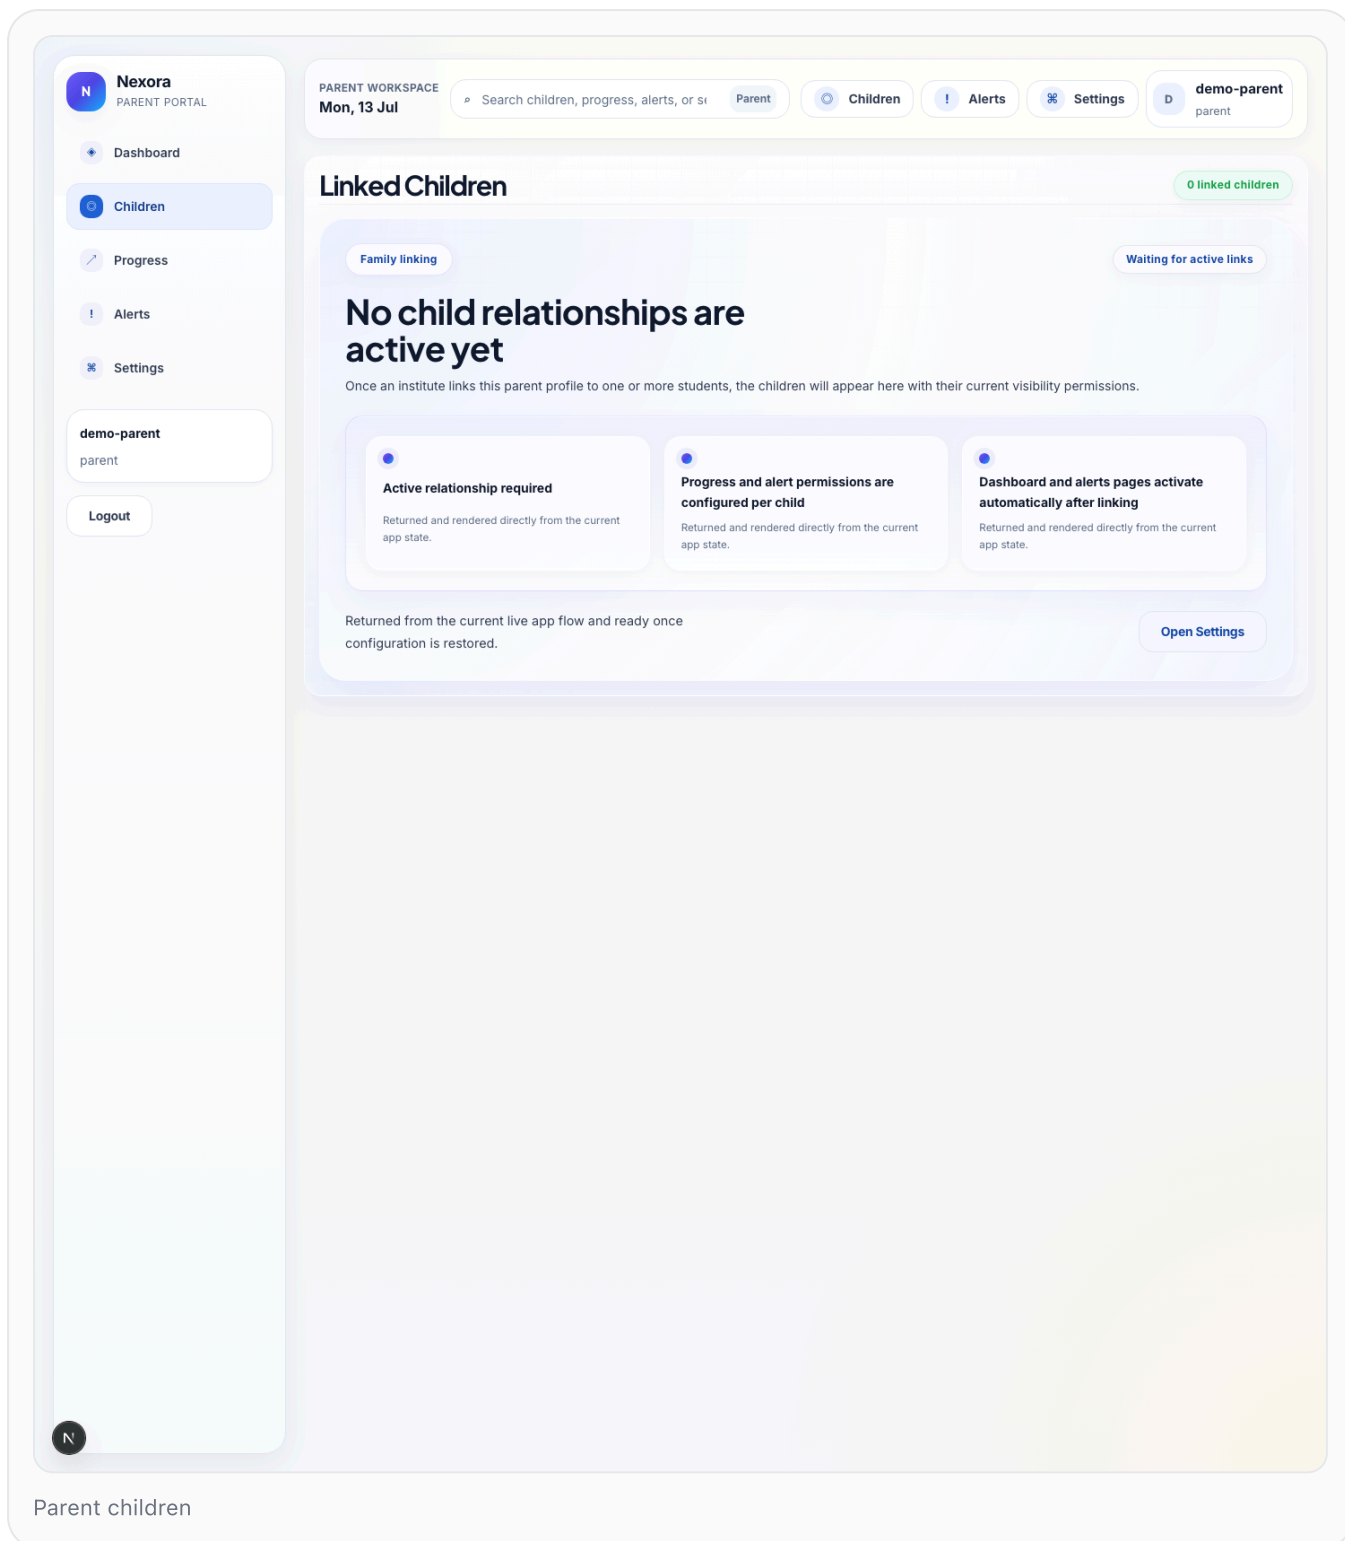

Dashboard

Parent dashboard

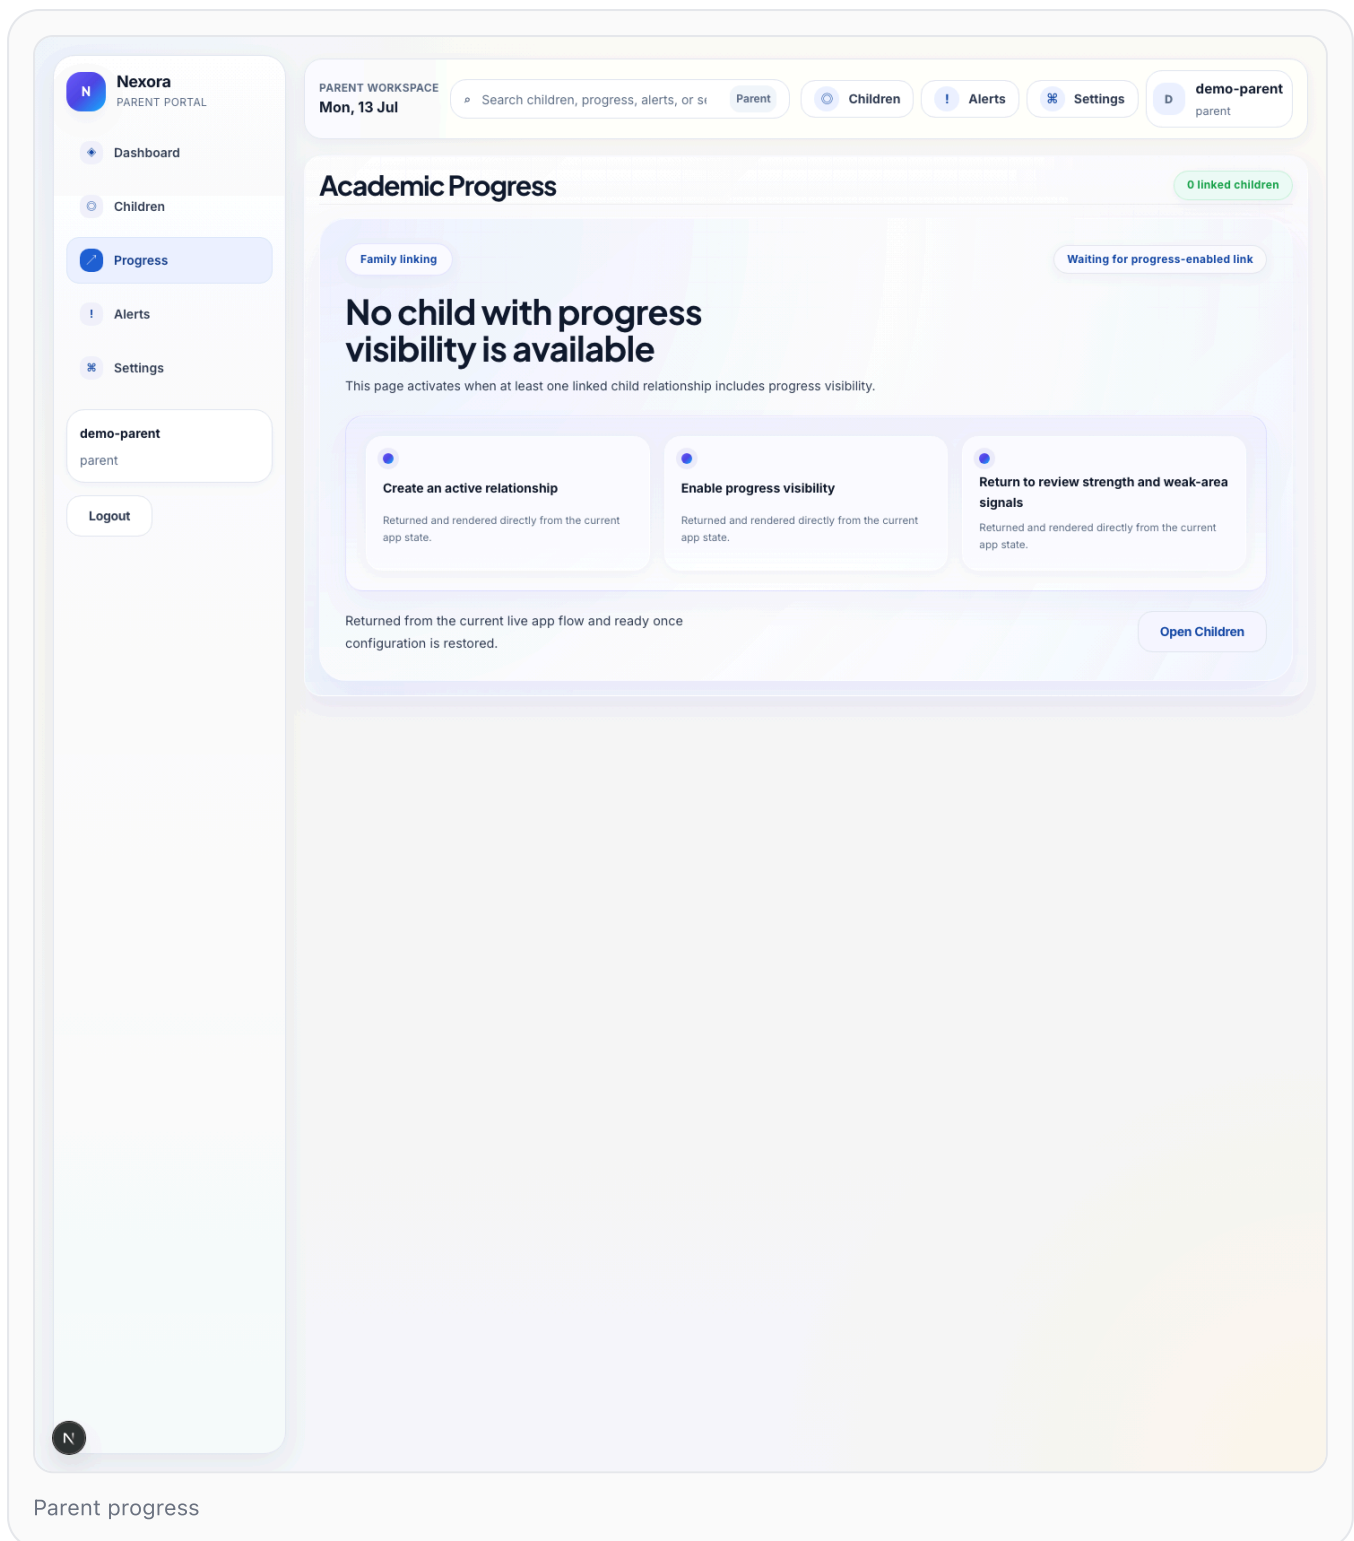

This is the family starting point for summary cards, child scope, and next actions.

Children

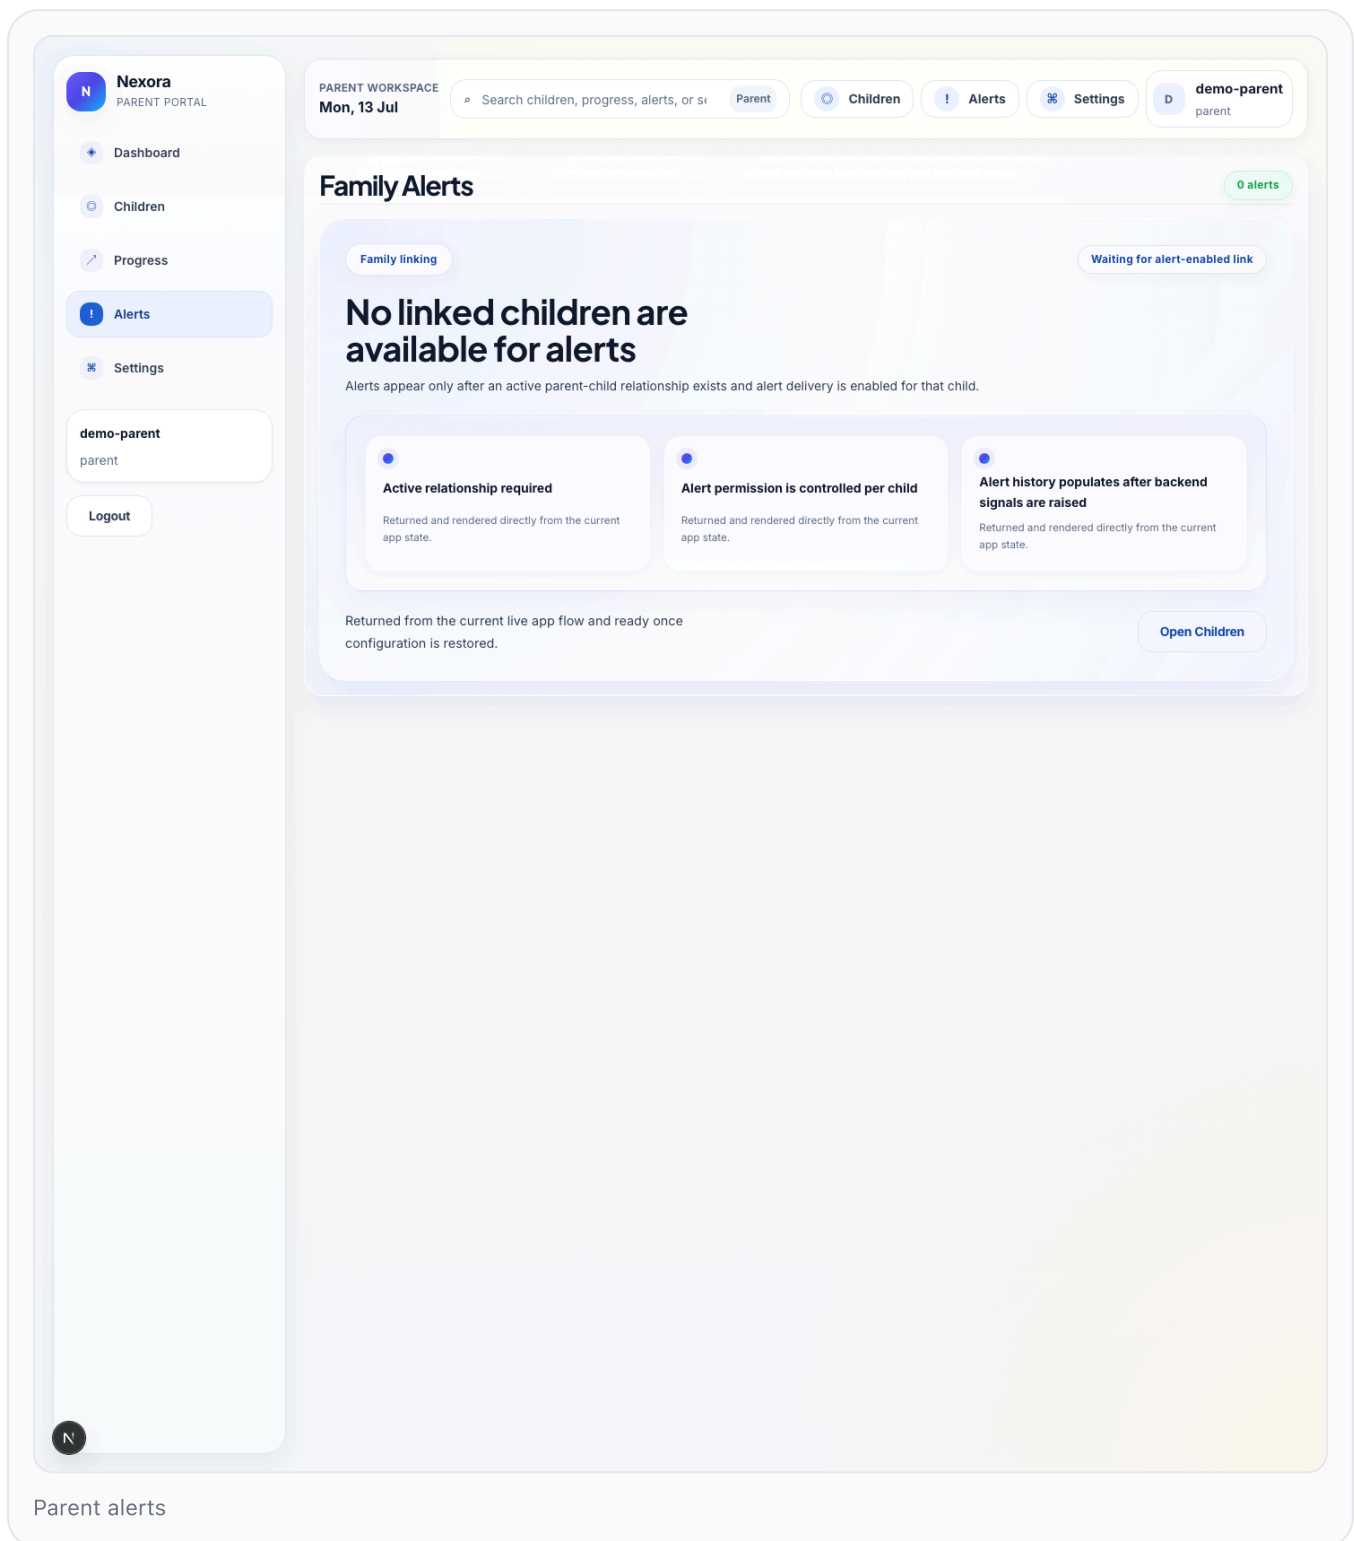

Use this screen to review linked children and move into child-specific views.

Progress

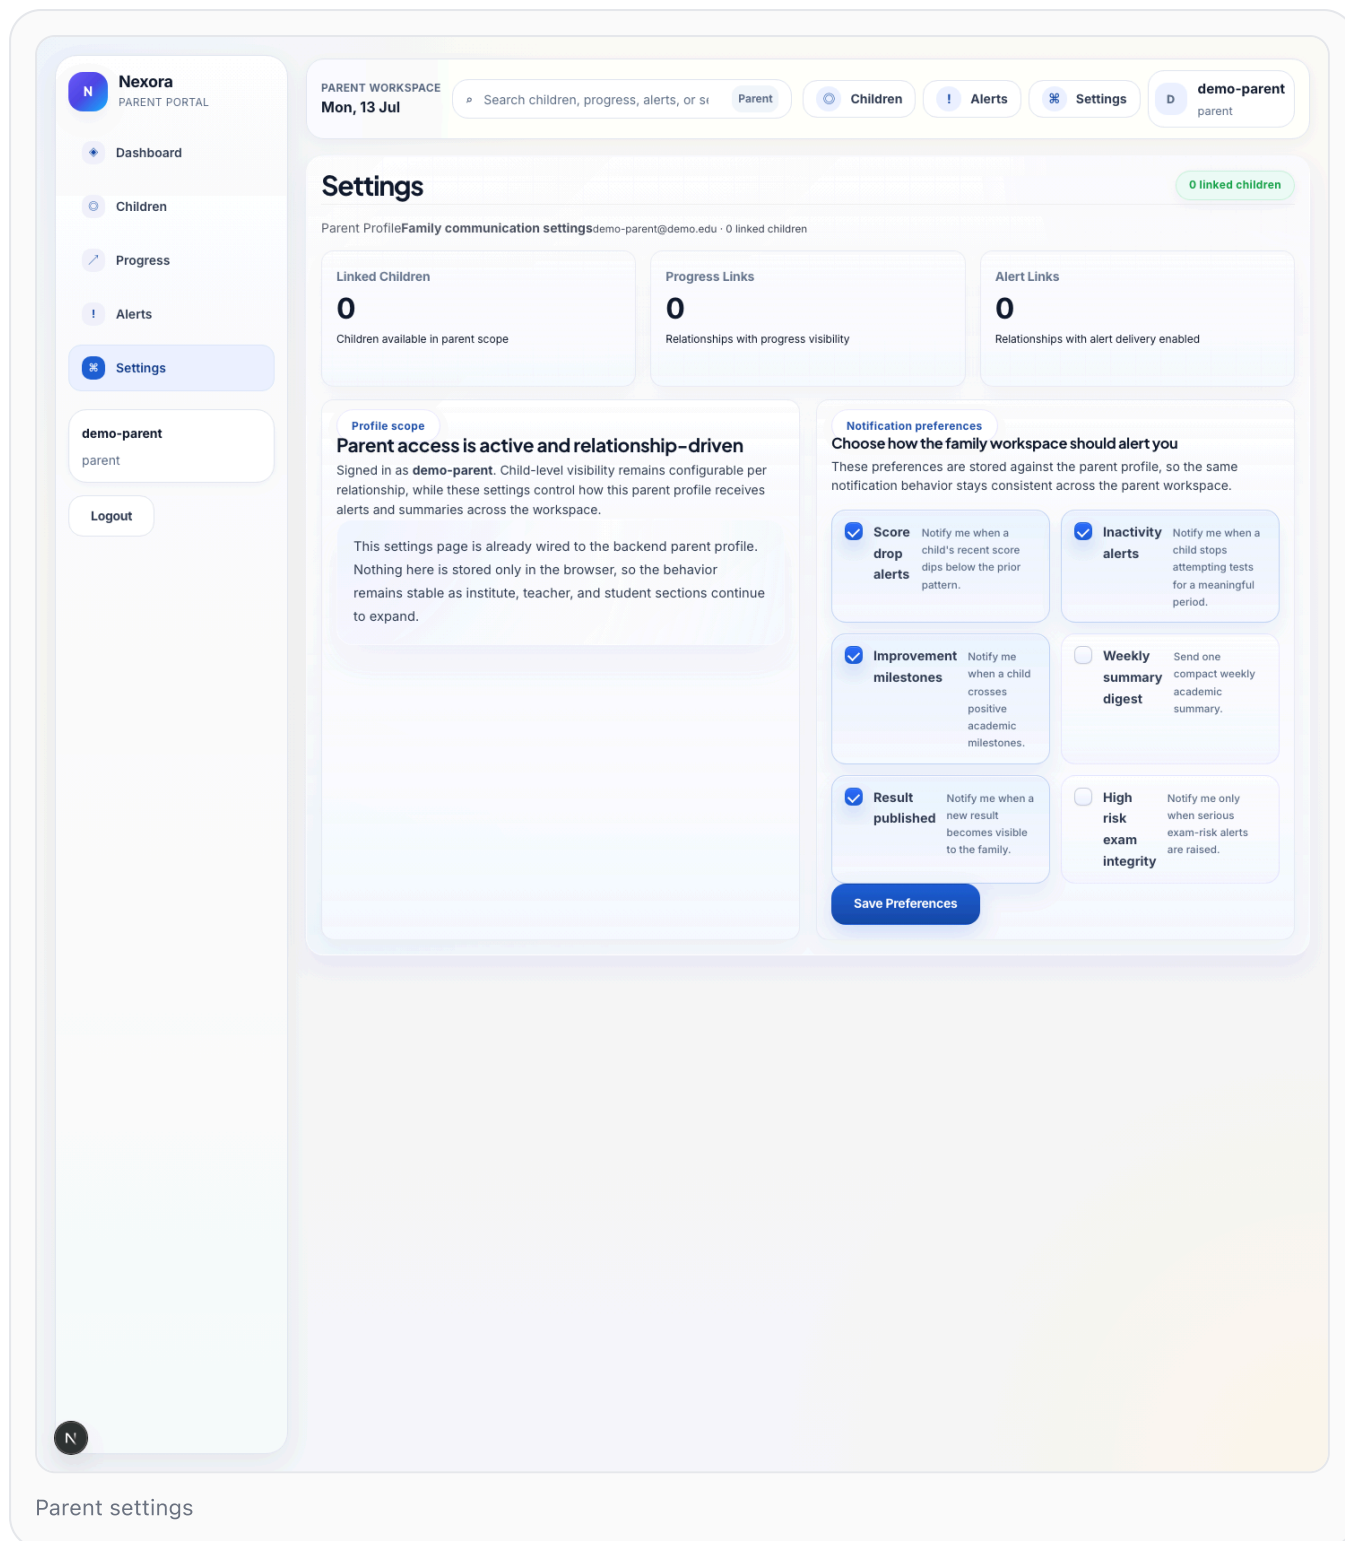

Use this screen to understand progress trends and readiness signals.

Alerts

Use this screen to inspect alerts, severity, and status updates.

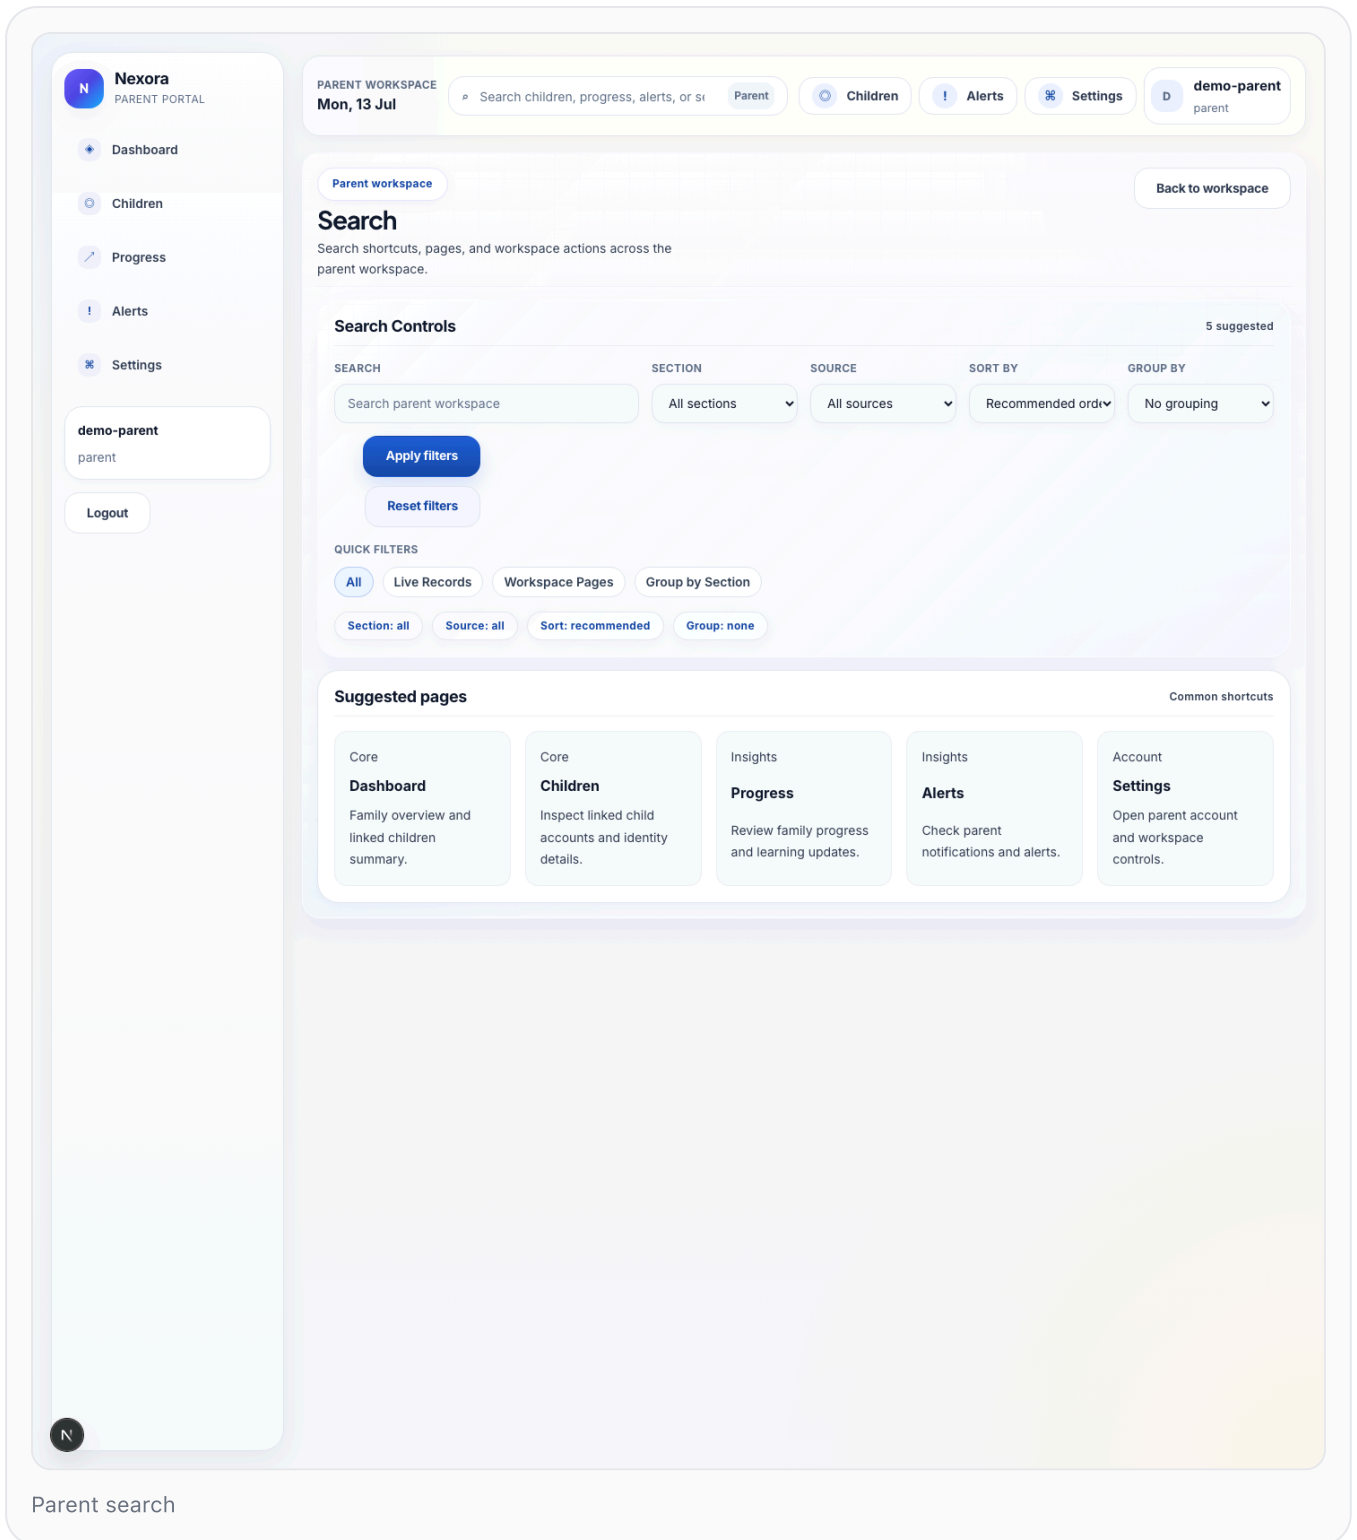

Settings

Parent settings

Use this screen to manage preferences and workspace controls.

Search

Parent search

Use search to quickly jump between children, alerts, progress, and settings.

Common workflows

Review a child

1. Open **Children**.
2. Pick the linked child you want to inspect.
3. Open **Progress** for trends.
4. Open **Alerts** if you need current issues or reminders.

Stay on top of changes

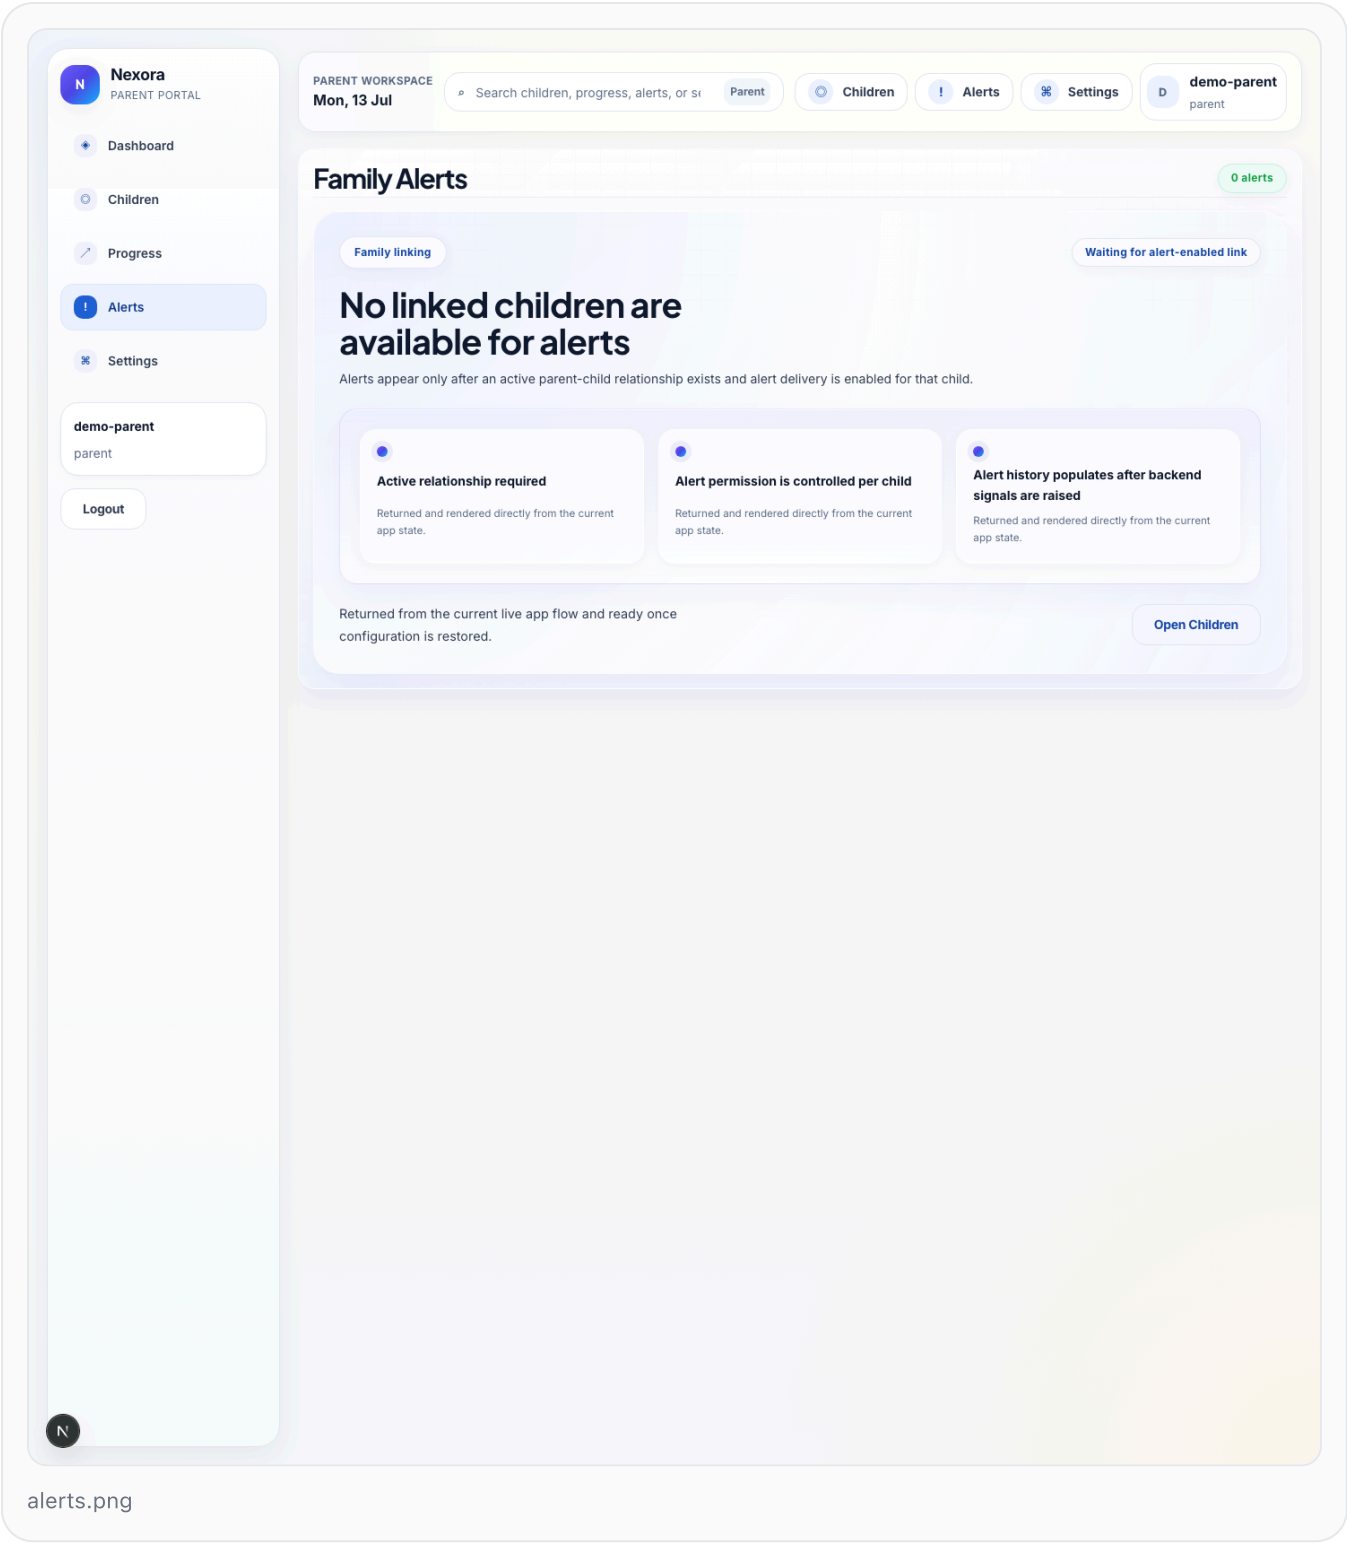

1. Open [Dashboard](#) .
 2. Review the main summary cards.
 3. Check [Alerts](#) for urgent updates.
 4. Use [Settings](#) if you want to tune notifications.
-

Helpful notes

- Parent is intentionally observational and supportive.
- Parent does not take exams or manage institute content.

Linked Children

0 linked children

Family linking

Waiting for active links

No child relationships are active yet

Once an institute links this parent profile to one or more students, the children will appear here with their current visibility permissions.

Active relationship required

Returned and rendered directly from the current app state.

Progress and alert permissions are configured per child

Returned and rendered directly from the current app state.

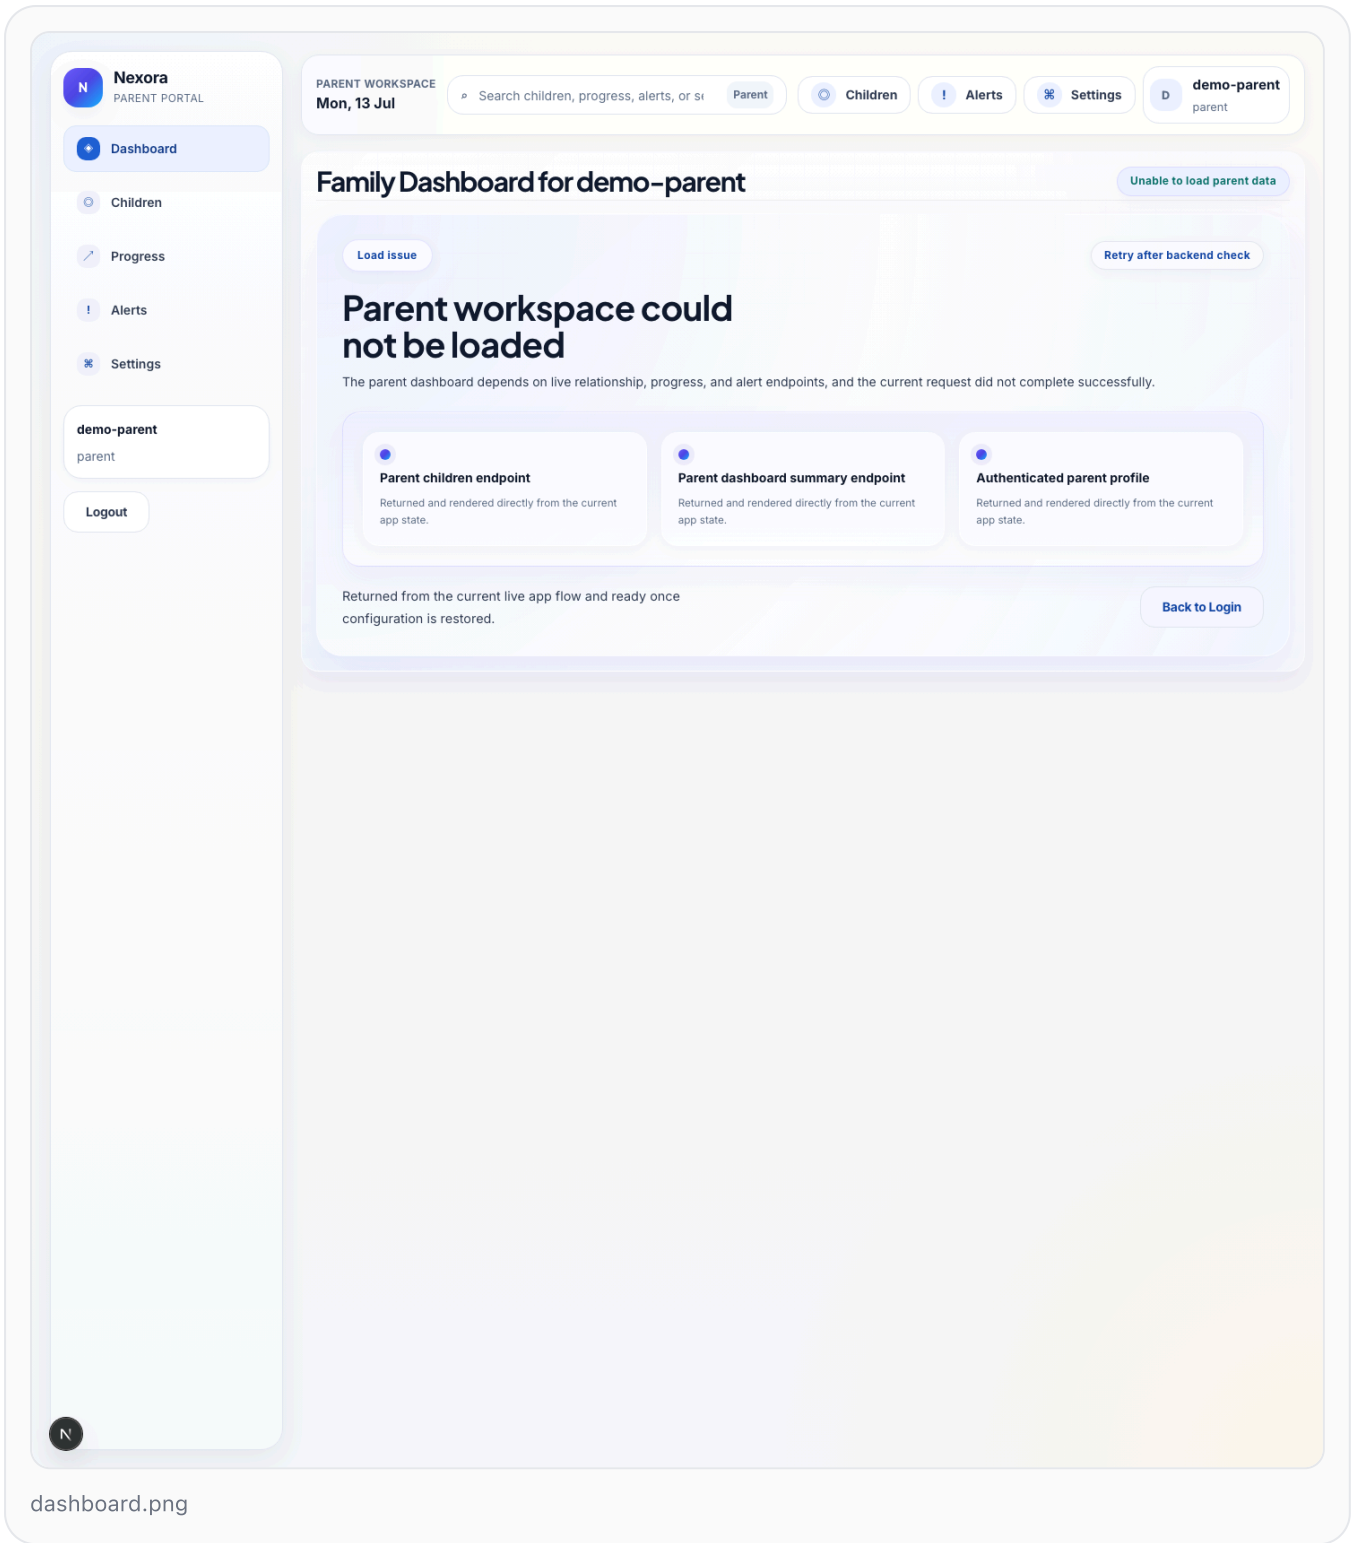

Dashboard and alerts pages activate automatically after linking

Returned and rendered directly from the current app state.

Returned from the current live app flow and ready once configuration is restored.
