

Results And Analytics

A polished walkthrough for teachers, institute admins, and students to inspect results, publication state, review access, and learning analytics.

Results And Analytics User Manual

Overview

This guide explains how to inspect results, publication state, summary views, and learning analytics.

This manual is written for:

- teachers
- institute admins
- students

The result experience is role-aware, but the core truth is the same:

- some results are pending
- some are summary-only
- some support full review
- some need follow-up action

Routes Covered

- `/teacher/results`
- `/institute/results`
- `/app/results`
- `/app/analytics`

Before You Begin

Make sure the exam or attempt has already progressed far enough to generate a result record.

If results are missing, check:

- whether publication has happened
 - whether the attempt is complete
 - whether the current filters are hiding the record
-

Page Layout

Results pages usually combine:

- filter bars
- grouping controls
- result cards or tables
- visibility and publication indicators
- summary or review links
- analytics drill-down panels

Premium follow-up guidance

Wallet

After a result is visible, the next recommended practice may be free, directly startable, or protected by premium access rules. When stars can unlock it, the exact action is shown here.

Results Recovery Loop

Start Practice

Result history is most useful when it sends the learner into the next repair action instead of becoming a passive score archive.

Use the summary or answer review to confirm the mistake pattern first, then continue into the matched practice lane.

DO THIS FIRST

Open the latest summary or review surface and identify the mistakes you want to repair next.

THEN NEXT

Move straight into the matched practice lane while that error pattern is still fresh.

AFTER THAT

Return to analytics, weak areas, or results to verify whether the same gap still appears.

Open Practice Lane

Open Weak Areas

What To Check

Before the next mock

Wrong answers usually need concept repair. Skips usually need confidence or pacing repair.

If review is already open, clear those errors before another broad test. If review is locked, use summary plus practice as the immediate loop.

Compare results only after the targeted practice follow-up, so the next trend reflects a real correction attempt.

Practice PW Sparse Subject 1783831317703 Updated

This PW Sparse Subject 1783831317703 Updated practice set is the best immediate follow-up for the current insight signal.

Use analytics to choose the weakest visible concept first, then move into practice before checking whether the next result trend improves.

A strong sequence is: open weak areas for the ranked topic, run the focused practice pass, then return to results or comparison views before scheduling another broad mock.

DO THIS FIRST

Open weak areas for the weakest ranked topic and move straight into the focused practice lane.

THEN NEXT

Finish that targeted practice pass before booking another broad mock or switching subjects.

IF BLOCKED

If the topic still feels unclear, compare recent results and review question evidence before retrying.

Open Focused Practice Workspace

Open Weak Areas

Action Logic

State-aware handoff

The recommendation starts from the weakest topic visible in the current filtered analytics view.

The CTA then prefers resume, start, unlock, and detail states in that order so the action stays truthful to live backend access.

If the latest result is already visible, compare recent results before another mock. If not, use weak areas and focused practice as the safer next move.

Key Areas

Filters

Use filters to narrow by:

- publication state
- result status
- score band
- rank
- source
- review availability

Grouping

Grouping helps you compare results by:

- source
- outcome
- review state

Summary And Review

The result card or row may provide:

- summary access
- answer review access
- practice follow-up action
- publication readiness messaging

Analytics

Analytics views help students and support staff understand:

- weak topics

- trend lines
- source comparisons
- timeline progress

Common Tasks

Filter Results

1. Open the results page.
2. Choose the publication or outcome filter.
3. Apply the filter.
4. Check whether the result cards match the expected scope.

Open Summary

1. Open the result card.
2. Click the summary link.
3. Review the post-submit state and the score summary.

Open Review

1. Open a published result that supports review.
2. Click `Open Answer Review`.
3. Check whether the review route is available or intentionally blocked.

Inspect Analytics

1. Open analytics from the student workspace.
2. Drill into a source, subject, or timeline view.
3. Confirm the context stays stable while navigating between drill-downs.

Tip: When results and analytics disagree, trust the publication state and current filters first.

Common Mistakes

- expecting a review link before the result is published
- assuming every attempt has the same visibility rules
- mixing teacher/institute summaries with student-safe analytics
- forgetting that filters can hide the exact result you are looking for

Troubleshooting

A result does not appear

Check whether:

- the result is still pending publication
- the wrong source or status filter is active
- the student has not completed the attempt

Review is unavailable

That usually means:

- review has not been enabled yet

- the result is summary-only
- the current route intentionally blocks review
